Setting up R, vimtex and Ultisnips in vim on a Mac

2024-01-24

Figure 1: vim setup

1 Introduction

Start by installing vim (neovim), R tex vimtex ultisnips

See post "Setting up a minimal neovim..." for details on installing plugins with Neovim.

2 Sections

1. vim sections
2. ALE, lSP, completion, lintr, fix

- R
- julia
- python

2. ftplugins
3. ultisnips
    - dynamic
4. vimtex

- completion

3 Install and configure plugins (source file ~/.vimplugins)

```
call plug#begin()
Plug 'jpalardy/vim-slime'
Plug 'klafyvel/vim-slime-cells'
let g:slime_target = "vimterminal"
let g:slime_no_mappings = 1
let g:slime_vimterminal_config = { "vertical": 1 }
let g:slime_vimterminal_cmd = "R"
" match either ### (R) or ``` (rmd, quarto) to delimit cells
let g:slime_cell_delimiter = "^\\s*\\(###\\|```\\)"
nmap <C-c>v <Plug>SlimeConfig
nmap <localleader>l <Plug>SlimeCellsSendAndGoToNext
nmap <localleader>j <Plug>SlimeCellsNext
nmap <localleader>k <Plug>SlimeCellsPrev
Plug 'lervag/vimtex'
let g:vimtex_complete_close_braces=1
let g:vimtex_quickfix_mode=0
Plug 'sirver/ultisnips'
let g:UltiSnipsJumpForwardTrigger="<tab>"
let g:UltiSnipsJumpBackwardTrigger="<S-tab>"
nnoremap <leader>U <Cmd>call UltiSnips#RefreshSnippets()<CR>
nnoremap <leader>u :UltiSnipsEdit<cr>
Plug 'dense-analysis/ale'
let g:ale_completion_enabled = 1
let g:ale_virtualtext_cursor = 'disabled'
let g:ale_set_balloons = 1
highlight clear ALEErrorSign
highlight clear ALEWarningSign
let g:ale_sign_error = ' '
let g:ale_sign_warning = '.'
let g:ale_linters = {'python': ['pylsp']}
" Set this variable to 1 to fix files when you save them.
let g:ale_fix_on_save = 1
let g:ale_fixers = {
\   '*': ['remove_trailing_lines', 'trim_whitespace'],
\   'r': ['styler'],
\   'rmd': ['styler'],
```

```
\   'python': ['black','isort'],
\   'javascript': ['eslint'],
\}
nnoremap <leader>n :ALENext<CR>
Plug 'junegunn/fzf', { 'do': { -> fzf#install() } }
Plug 'junegunn/fzf.vim'
nnoremap <leader>f :Files<CR>

tnoremap ZZ q('no')<C-\><C-n>:q!<CR>
```

5 Practical application

1) set analysis goal: Logistic regression of Palmer Penguins data set predicting gender.

Start with a barebones system. i.e. only vim, R and latex installed.

Step one: add the minimum to vim to allow rmarkdown development. Simplest approach: open vim with empty analysis file. p.Rmd

```
> cd ~/prj/qblog/posts/setup_R_vimtex_ultisnips/penguins
> vim -u .myvimrc p.Rmd
# first line for analysis is to load the penguin data
# enter insert mode and type first R command
inside_vim_normal_mode> i
inside_vim_insert_mode> library(palmerpenguins)
# exit insert mode
inside_vim_insert_mode> C-c
# yank (copy) line into register (unnamed register ")
inside_vim_normal_mode> yy
# open a terminal inside vim and run the R repl
inside_vim_command_mode> term
inside_vim_term> R
# paste last yank (stored in register ") from p.Rmd buffer to R repl
inside_vim_terminal_running_R> C-w ""
```

Next we want to add some plugins to .myvimrc to allow ultisnips snippets for rmd files. Install the vim-plug Vim plugin manager

```
sh> curl -fLo ~/.vim/autoload/plug.vim --create-dirs \
    https://raw.githubusercontent.com/junegunn/vim-plug/master/plug.vim
```

in vimrc> call plug#begin

in vimrc> call plug#end()

2) mkdir ~/sbx/penguins
3) mvim peng.Rmd
4) type rheader on the first line and hit TAB. The will match the snippet string in Ultisnips and insert a text template with YAML markup and latex text (for bibtex use). The snippet has X tabstops to allow customization of the text block. Enter text in the first block indicating the project name and then hit C-j to navigate to the next tab stop: the title. Repeat the process to provide the project specific information in the YAML and bibliography call. NB: don't leave insert mode when navigating between tabstops or the ultisnip process with exit.

6 Rmd template

6.1 YAML header

The RMD file contains a YAML metadata header delineated with the lines "—" above and below. For this example we want to generate a pdf formatted output file.

The YAML can be as simple as one line specifying the output as pdf.

```
---
output: pdf_document
---
```

Which results in a simple output file as follows:

Figure 2: simple pdf

Introduction

Begin by loading the palmerpenguins package.

```
df1 <- palmerpenguins::penguins
```

NB. to invoke file completion in vim for the rmd (or quarto) change the vim filetype using the command:

```
:set filetype=tex
```

then enter, e.g., `\includegraphics{` or `\input{` followed by `C-x C-o`. and a pop-up menu with possible completions with appear.

````
---
title: "Penguins data analysis"
author: "R.G. Thomas"
date: "2024-01-24"
output:
  pdf_document:
    keep_tex: true
    includes:
header-includes:
    - \usepackage{lipsum, fancyhdr, titling, currfile}
    - \usepackage[export]{adjustbox}
    - \pagestyle{fancy}

Appendix

Use tab for a) ultisnip snippet navigation (move from one tabstop to the next)
and b) for navigation forward inside popup menu

```sh
let g:UltiSnipsExpandTrigger="<C-tab>"
let g:UltiSnipsJumpForwardTrigger="<tab>"
let g:UltiSnipsJumpBackwardTrigger="<S-tab>"

inoremap <expr> <tab> pumvisible() ? "\<C-n>" : "\<tab>"
inoremap <expr> <S-tab> pumvisible() ? "\<C-p>" : "\<S-tab>"
```
