Setup Ubuntu on AWS or parallels

A set of tips for post install

1 Introduction

Could I use Docker?

This seems like genius:

```
 alias nvim="docker run -it -v `pwd`:/mnt/volume --workdir=/mnt/volume anatolelucet/neovim
alias nvim="docker run -it -v `pwd`:/mnt/volume --workdir=/mnt/volume anatolelucet/neovim:
```

- step one set up parallels tools. Use "Actions" menu to select "install parallels tools. This will point CD/DVD device at the iso image. Open the DVD in"Files". Open install parallel tool-gui.

- macbook harddrive will be available under share

- Firefox is installed. Add vinium-ff extension.
